

Dog-A-Long ATV Rider

Instructions

Your Dog-A-Long Rider is designed to fit on the rear rack of an ATV and is fastened with straps and quick release buckles so it can be installed and removed in minutes.

Place the Rider on the rear rack with all straps hanging below the rack. The cut-out needs to be toward the front of the ATV. Fasten the two front-to-rear straps by wrapping them around and under the rear rack and joining them to the quick release buckles. Tighten and adjust them until they are secured firmly. Repeat this process with the side strap.

Your dog now can be placed in the Dog-A-Long. To keep them restrained, connect one end of the retention strap to the belt in the center of the Rider and the other end to your pet's harness.

The Rider and pet are now secured to the ATV.

Should the cover require washing it can be hosed down and scrubbed with a brush and soap. If necessary, the cover can be removed from the foam core by removing the buckles and slipping it off of the foam. Machine-wash on the gentle cycle. DO NOT use fabric softener or bleach. Hang dry or machine dry on low heat.
